Matched H2RES profile comparison: reporting years 2020–2024
15 generated years per generator; fixed baseline repeated; temperature baseline is a climatology proxy
A Individual-path distributions (lower is better)
Wasserstein / training SD
Original H2RES
XGBoost + bootstrap
Selected CVAE
Solar
Wind
Temperature
B Wind persistence (lower is better)
Mean absolute ACF error
Lag (hours)
C Interannual wind variability (100% = observed)
Annual wind-mean SD / observed SD (%)
D Renewable-yield index spread
SD of annual mean (solar CF + wind CF)
Observed five years
